

BR Class 08/11 Locomotive Kit – 2019 Addendum

The kit has not been available for a number of years. The kit is now relaunched as a set of independently available parts and now includes new elements including a simpler functional chassis etch, 3D printed cosmetic chassis and improved cab etch.

The instructions from the original kit have not been updated, so you will need to adapt these if you decide to incorporate some or all of the new elements into your build.

If you wish to construct an example of this locomotive, please follow this procedure:

- Request a copy of the instructions from the Sales Officer - sales@2mm.org.uk
- The instructions will be made available via Dropbox as the instructions are substantial and too large to host online. If you require a printed copy, a small charge will be made to cover printing and posting costs.
- Read the instructions and decide which components you will require - some may no longer be available through the Association depending upon the construction method you decide upon. An example may be if you decide to use imperial gears.
- Order the Association components through the shops in the normal manner.

SUMMARY OF PARTS

3-711a Locomotive Body: Class 08: Etched N/S

3-711b Locomotive Body: Class 11: Etched N/S

These are the etches from the original kit. The etch includes the cab sides, cosmetic chassis details and elements to detail the resin bonnet. You will need one of these as part of your model.

3-712a Locomotive Functional Chassis: Class 08: Etched N/S

3-712b Locomotive Functional Chassis: Class 11: Etched N/S

The original functional chassis is no longer available. This new etch is assembled in a similar manner to the other Association etched loco chassis (including those for commercial N Gauge bodies). You will need one of these as part of your model.

3-713a Locomotive Cosmetic Chassis: Class 08: 3D Print

3-713b Locomotive Cosmetic Chassis: Class 11: 3D Print

If you would prefer not to use the elements in the original etch, this provides a quick and easy substitute. This is an optional part.

3-714a Locomotive Cab: Class 08: Etched N/S

3-714b Locomotive Cab: Class 11: Etched N/S

The cab sides have been redrawn to provide an improved/more detailed version. This is an optional part.

3-715a Locomotive Cab Roof: Class 08: Cast Resin

3-715b Locomotive Cab Roof: Class 11: Cast Resin

These are the original cast design. They will fit with the original cab etches or the revised versions.

3-716 Locomotive Bonnet: Class 08/11: Cast Resin

This is the original bonnet casting. You will need this as part of your model.

You will need to order other components to complete your model; wheels, gears, motor etc. The majority of these will be available through the Association, but you may occasionally wish/need to use parts from third party suppliers.
